Ecosphere Organics

Building the missing supply chain layer between organic by-products and sustainable manufacturing.

COMPANY

Circular Materials Platform

MATERIALS

Powders, pigments, fibers, fillers, sheets

CURRENT FOCUS

Material evaluation, manufacturing trials and scalable waste-to-material partnerships

Problem and Solution

The Gap

Manufacturers need reliable alternatives to petrochemical materials, but waste-derived material supply remains fragmented, inconsistent, and difficult to scale.

Our Solution

Ecosphere Organics converts pre-consumer food and agricultural by-products into base and semi-finished materials. We combine feedstock sourcing, material development, and technical evaluation to support manufacturing trials and repeat supply, with modular processing systems in development.

Platform

Material Formats	Powders, pigments, fibers, fillers, sheet & film materials
Technical Services	Material fit and evaluation; feedstock and custom-material trials; application prototyping; manufacturing/conversion support
Traction	$140K+ non-dilutive support, paid pilots, thousands of pounds processed, patent-pending modular processing technology.

Commercial Partnerships

1. **Converters & Manufacturers**
   Evaluate materials, run trials, and create repeat demand
2. **Brands & Product Teams**
   Specify materials and pull adoption through supply chains
3. **By-product Owners**
   Pursue paid pilots, technical services, and circular material pathways

Pipeline: manufacturing and product teams in packaging/CPG, fashion/accessories, circular economy partners, and agricultural feedstock partners.
